

Hey Chris Longman,

Hope this message finds you well! I'm reaching out because I recently came across an exciting job opportunity at Navitas. As a computer science sophomore at Brown University, I was drawn to this internship because it offers exposure to all phases of the venture investment process, including sourcing, underwriting, and monitoring the firm's investments.

To better understand my qualifications, I'm a QuestBridge Scholar, one of 1,400 finalists nationwide to receive a full-ride scholarship for first-generation, low-income, high-achieving students. I also won "Best First Time Hack" at Hack Harvard 2022 out of 500 hackers. I have relevant coursework in Computer Systems, Software Engineering, Computer Architecture, Data Structures & Algorithms, and Cryptographic Systems.

Regarding professional experience, I'm a Teaching Assistant for Discrete Math at Brown University. Last summer, I worked as a Volunteer Environmental Conservationist with AmeriCorps NCCC, leading a team of 7 across 5 projects, restoring 20 miles of National Forest trail. In High School, I was a Child Care Supervisor with Durango Parks & Recreation. I organized and led daily activities for 30-45 children ages 5-8, including arts & crafts, swimming, and visiting the park.

On the extracurricular front, I'm currently leading a team of 4 as the Product Manager for Full Stack @ Brown, where we're redesigning Brown University's course review website used by 8,000+ students. I'm also the Hackathon Coordinator for Brown Applied Computing and the Vice President of Blockchain @ Brown, where I organized recruiting events with Unstoppable Domains and Dexterity Capital. Outside of programming, I enjoy basketball, martial arts, rock climbing, podcasts, tea, real estate, venture capital, and entrepreneurship.

Thank you for considering my application,

Christian Armstrong
